Notes:
1. Whilst every effort has been made to ensure the accuracy of this map, La Tene Maps or the European Wind Energy Association are not liable for any errors or omissions whatsoever.

2. La Tene Maps acknowledges the help and assistance from the European Wind Energy Association and other companies who contributed information and comments in the preparation of this map.

3. Only wind farms which are built or those under-construction are shown on this map. This map deals mainly with projects with a generating capacity of 1.2MW or greater. However for some areas smaller projects may be shown.

5. All boundaries and limits are indicative rather than absolute.
6. Any errors or omissions notified to us will be corrected in the next edition.

Reliable converters for offshore conditions?
Power and productivity for a better world™ ABB
ABB's pioneer work in medium voltage wind converters offers today highly reliable drive-train solutions even for most challenging offshore sites. Compact size, high efficiency and small part count are only some of many advantages of ABB's IGCT-based converters.

How do we harness the power of the wind offshore for the cities onshore?
The wind is at its strongest and most constant out at sea, so offshore wind farms deliver even more clean power.
At the Øresund, off the Swedish coast, a revolution is taking place. In fact, hundreds of thousands of revolutions every day. Revolutions of wind turbine blades out at sea, away from the coast, where wind conditions are at their strongest. The Lillgrund wind farm – Sweden's largest, operated by Vattenfall – provides clean and renewable power for 60,000 Swedish households. With 18 years of experience in offshore wind power, Siemens has the reliable technology to get the best out of offshore wind resources. www.siemens.com/energy
