<b>Total Europe</b>	<b>57,125</b>	<b>8,877</b>	<b>65,933</b>

\*FYROM = Former Yugoslav Republic of Macedonia  
Note: Due to previous-year adjustments, project decommissioning of 70 MW, re-powering and rounding figures up and down, the total for the 2008 end-of-year cumulative capacity is not exactly equivalent to the sum of the 2007 end-of-year total plus the 2008 additions.

## New power capacity installed in 2008

\*Geothermal, peat and waste

\*\*This is a preliminary figure for solar photovoltaic installations (source: European Photovoltaic Industry Association (EPIA)).

Photovoltaic data has not been included in the graphs below, however, taking account of 4.2 GW of solar PV installations, out of around 24 GW of total new power generation capacity built in the EU in 2008, wind energy accounted for more than 35%. As a result, renewable energy represented over 57% of all newly added power capacity in the EU in 2008.

## Net increase in power capacity EU 2000-2008

\*Geothermal, peat and waste

## New electricity generating capacity EU 2000-2008

\*Geothermal, peat and waste
